

Keep your family's most important documents safe.

Family Vault is an invite-only, end-to-end encrypted vault for families.

Store medical records, financial documents, property papers, and memories in one secure place.

[See How It Works](#)

End-to-End Encrypted

Only your family can access the vault. No one else — not even us.

Built for families

Everything you need to manage important documents together.

End-to-End Encryption

Documents are encrypted on your device before upload. Only family members you authorize can decrypt them.

Family Sharing

Create a family, invite members by email or phone, and assign roles. Admins, members, and viewers — full control.

Document Categories

Organize by personal, financial, medical, insurance, and property. Never lose a document again.

Expiring Document Alerts

Get notified before passports, insurance policies, and licenses expire. Stay ahead of deadlines.

Invite your family in minutes

A simple two-step approval workflow keeps your vault secure.

- 1 Create a family**
Sign up, create your family vault, and set yourself as the owner.
 - 2 Send an invitation**
Share a secure invite link via email, phone, or messaging apps using an invitation code.
 - 3 Accept & approve**
The invitee accepts the invitation. An admin approves the request and a secure family member is added.
 - 4 Upload and share**
Everyone can upload documents, view shared records, and receive expiry alerts.
-

Ready to secure your family's future?

Download the app, create your family vault, and start uploading documents today.
